Research Interests

Learning technologies and multimodal sensing of hands-on learning; detecting when learners get stuck and which steps cause the most difficulty; timing of help that supports both confidence and mastery; using these findings to redesign learning activities and support for educators.

Education

New York University, Tandon School of Engineering *Sept 2024 – Dec 2026 (expected)*
New York, NY
M.S., Electrical Engineering, GPA: 3.926/4.0 | GRE: 327
Relevant coursework: Machine Learning, Interactive Medical Robotics, Systems Engineering, Real-Time Embedded Systems, Digital Signal Processing, Computing Systems Architecture, Applied Matrix Theory, Probability and Stochastic Processes

Shenzhen University, Shenzhen, China *Sept 2020 – July 2024*
B.S., Physics, GPA: 3.65/4.0 | Outstanding Undergraduate Thesis Award

Teaching and Mentoring Experience

Teaching Assistant, ECE 6113 / BE 6403 Digital Signal Processing I *Fall 2026*
NYU Tandon School of Engineering, New York, NY

- Hold weekly office hours (about 2 hours per week) and answer students' questions on Digital Signal Processing concepts and course material.
- Write midterm and final exam questions and grade student work.
- Coordinate weekly synchronous sessions, lecture recordings, and course materials on Brightspace.

Graduate Student Mentor *Summer 2026*
NYU Tandon School of Engineering, New York, NY

- Advise incoming graduate students on course selection, academic planning, and campus and career resources.

Publications

Ge, W., Wen, P., Li, Z., Luo, Q., Zhao, C., Wang, J., & Yang, M. (2023). Application of the Method of Manufactured Solutions to Verify a Nuclear Reactor Physics Computational Code Using the Method of Characteristics. *Proceedings of the 30th International Conference on Nuclear Engineering (ICONE30)*, Paper 1702. doi:10.1299/jsmeicone.2023.30.1702

Contributor, *Wanderland*: a multi-sensor capture and 3D-reconstruction pipeline for embodied-AI simulation (CVPR 2026 Highlight), NYU AI4CE Lab.

Research Experience

Independent Research: Audience Behavior & Content Experiments *Sept 2024 – Present*
Self-directed

- Design and run continuous content experiments (format, hook, posting cadence, visual direction) across social platforms reaching 150,000+ combined followers, using real-time engagement data to test hypotheses about user attention and retention.
- Grew a new account from 0 to 10,000 followers within one month through systematic testing of content variables.
- Translate complex technical and lifestyle topics into accessible content for cross-cultural, international audiences.

Research Assistant: Surgical Navigation Simulation *Feb – Aug 2026*
New York University (PI: Prof. Rui Li), New York, NY

- Built a real-time human-in-the-loop pipeline connecting a haptic input device (3D Systems Touch) through ROS2 to RViz and 3D Slicer/SlicerROS2, enabling manual navigation and visualization within vascular anatomy.
- Built an Arduino and Python data-acquisition workflow to stream and analyze two tactile sensors in real time, characterizing noise and contact response.
- Owned hardware and driver integration, real-time visualization, and system validation.

Research Assistant, AI4CE Lab (PI: Prof. Chen Feng) *Apr 2026 – Present*
New York University, New York, NY

- Collect real-world indoor and outdoor spatial data using MetaCam and process it into 3D scene representations and point-cloud datasets for embodied-AI research; build preprocessing and quality-review pipelines.
- Serve as student team lead for Wanderland (CVPR 2026 Highlight); train new members on capture protocols, coordinate onboarding, and track team progress.

Research Intern, Embodied AI and Robotics, AI2 Robotics *Oct 2025 – Jan 2026*
Shenzhen, China

- Designed test protocols and performance metrics across seven robot subsystems and documented failure cases for cross-team troubleshooting.
- Ran three technical demonstrations for prospective partners, contributing to new partnerships with organizations in Dubai and Singapore.

Undergraduate Thesis Research: Sb_2S_3 Thin-Film Solar Cells, Shenzhen University *2024*
Outstanding Undergraduate Thesis Award

- Fabricated thin-film solar cells and characterized them with XRD, SEM, J–V, and EQE; improved power conversion efficiency from 4.43% to 5.43%.

Undergraduate Research: Nuclear Reactor Physics, Shenzhen University *2020 – 2024*
First-author publication at ICONE30

- Applied the Method of Manufactured Solutions to verify a reactor physics simulation code through numerical modeling, coding, and debugging.

Other Relevant Experience

Content & Communications, Kimber Health *July – Sept 2026*
New York, NY

- Conducted audience research on health-insurance information needs among international students at NYU, UCLA, and UChicago; developed localized Chinese-language content, FAQs, and in-person outreach materials to address identified information gaps.

Honors and Awards

- Mentor Scholarship, NYU Tandon School of Engineering, Fall 2026
- Violet Internship & Research Award (VISAA), New York University
- Outstanding Undergraduate Thesis Award, Shenzhen University

Skills

Programming: Python, MATLAB, C, C++, Verilog, HTML/CSS/JavaScript
Sensing & Systems: Arduino and STM32 sensor data acquisition, ROS2, 3D Slicer, MetaCam, 3D Systems Touch (haptic device)
Research Methods: audience/user behavior analysis, A/B testing, quantitative and qualitative data analysis, numerical verification methods
Languages: Mandarin Chinese (Native), English (Fluent)
